# Contents

<b>Preface</b>	<b>v</b>
<b>1 Limit</b>	<b>1</b>
<b>2 Derivative</b>	<b>3</b>
2.1 Definition . . . . .	3
2.2 Common formulas . . . . .	3
2.3 Derivative Cheat Sheet . . . . .	4
<b>3 Integral</b>	<b>5</b>

# Preface

I decided to fair copy my hand written general mathematics booklet using  $\text{\LaTeX}$ . This book is completely Open Source. You can contribute to this book and help to improve it. For additional information visist this repository. My main goal for writing this book is learning  $\text{\LaTeX}$ and create collaborative platform to write and improve technical documents on Azad University.

# **Chapter 1**

## **Limit**

# Chapter 2

## Derivative

### 2.1 Definition

Derivative limit definition:

$$\begin{aligned}\frac{df}{dx} &= f'(x) \\ f'(x_0) &= \lim_{x \rightarrow x_0} \frac{f(x) - f(x_0)}{x - x_0} \\ f'(x) &= \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}\end{aligned}$$

Proof of the Derivative of Constant:  $\frac{df}{dx}(c)$

$$\begin{aligned}f(x) &= c \\ f'(x) &= \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h} \\ &= \lim_{h \rightarrow 0} \frac{c - c}{h} \\ &= \lim_{h \rightarrow 0} 0 = 0\end{aligned}$$

### 2.2 Common formulas

$$(y = c) \rightarrow y' = 0$$

Example:

$$(\sqrt{2})' = \left(\frac{3}{2}\right)' = \left(\sin^{-1} \frac{1}{10}\right)' = 0$$

Note:  $(\sin \infty)'$  does not exist.<sup>1</sup>

## 2.3 Derivative Cheat Sheet

$$(y = c) \rightarrow y' = 0$$
